tubers

Awn	Hair or bristle-like extension, creating a hairy appearance
Bipinnate	Compound leaf with leaflets divided into further leaflets. Twice divided.
Calyx	Flower sepals around the outside of a flower, usually green
Cladode	Modified stem, functioning as a leaf
Compound leaf	Divided into leaflets
Deciduous	Shedding leaves in autumn / winter
Entire	Refers to leaf margin. No lobes, serrations or teeth.
Inflorescence	Arrangement of flowers on a stem
Margin	Edge of leaf
Ovate	Egg-shaped
Palmate leaf	Divided into 5 or more leaflets, all arising at the one point
Perennial	Plant living for more than two years
Pinnate	Compound leaf with leaflets arranged on either side of the leaf axis
Raceme	Inflorescence of stalked flowers, oldest at the bottom
Rhizome	Underground stem
Sepal	Segment of outer whorl (calyx) of the flower, usually green
Stamen	Male part of flower, produces pollen, consists of anther and filament
Stolon	Stem that grows at the soil surface or just below the ground and forms roots at the nodes and new plants from the buds
Tubers	Types of modified plant structures that are enlarged to store nutrients. There are both stem and root tubers.
Vegetative	Reproduction from plant parts, not involving seeds
