

Collecting Seed from native Plants for Propagation in our Nursery

- Always aim to collect seeds from at least 10 different plants of the species
- Collect no more than 10% of the seed on any plant
- Bag in paper or ziplock bag with details:

Date, Location, Name of plant, Name of collector

- If you don't know the correct name of the plant, pick a branch with leaves and fruit and bag with the seed for identification later
- Deliver seeds to nursery a.s.a.p. after collection, keeping seeds in dry condition.

If you bring us seeds without those details, we can't grow them for you, unfortunately.
